

Wondering how to solve your security compliance challenges?

Policy Commander® 2.0 enforces Windows system security automatically.

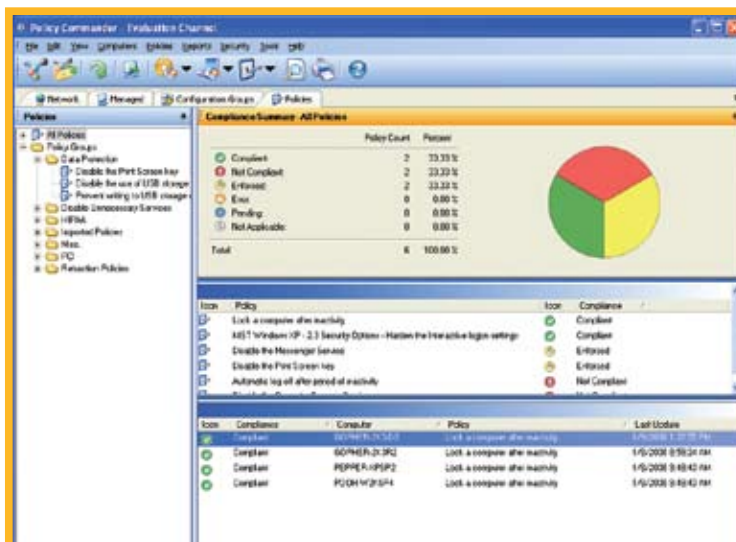

Protecting confidential information isn't just a best practice; it's a requirement under government and industry regulations like the Payment Card Industry standard (PCI), the Healthcare Portability and Accountability Act (HIPAA), and the Gramm-Leach-Bliley Act (GLBA). Policy Commander locks down Windows systems automatically to keep them compliant with security standards and protected from threats.

Automatic Enforcement.

New Boundary Technologies innovations like Smart Update™ and the Dynamic Security Policy format automatically keep Windows systems in a secure state—on or off the network.

Immediate Insight.

Comprehensive administrative reports and a Web reporting tool maintain audit trails and demonstrate security compliance to management and auditors. Alerting options can be set to instantly notify administrators of compliance breaches. Policy Commander actively monitors assigned security policies to maintain continuous compliance, and automatically restores computers to their approved security state if a policy is violated.

Control and Compliance.

Compliance challenges and security risks continue to grow, but the resources to manage them don't always keep pace. Policy Commander delivers a comprehensive library of policies for creating secure Windows configurations, a policy editor for easy policy customization, and simple drag-and-drop policy assignment. By automating security policy enforcement, Policy Commander creates self-monitoring, sustainable compliance environments for all of your Windows computers.

Innovative Features:

- **Dynamic Security Policy** format builds intelligence into each policy
- **Configuration Groups** enable automated administration of security configurations based on any system characteristic
- **Smart Update** actively monitors Windows systems for configuration changes and automatically performs defined administrative tasks to maintain ongoing compliance
- **Offline Enforcement** protects Windows systems when they leave the network
- **Web Reporting** delivers real-time information in any browser about the status of Windows system compliance
- **Console Reporting** maintains audit trails and documents compliance for management and auditors
- **Security Roles** delegate permission levels to maintain secure administrative practices

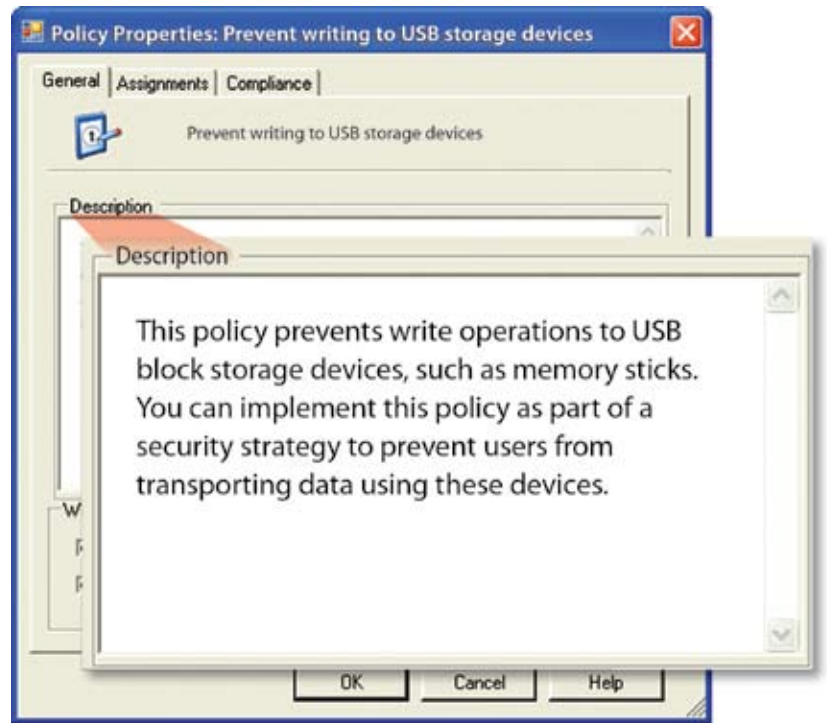

Key Benefits:

- **Compliance** with corporate and regulatory IT security requirements – automatically
- **Reduced risk** of security breaches and loss of brand integrity
- **Complete control** of Windows system security configurations
- **Automation** of processes to minimize impact on IT staff resources
- **Easy policy management** that virtually eliminates training and consulting costs
- **Granular control** of security policies and enforcement simplifies administration
- **Global enforcement** of policies protects offline and remote Windows systems
- **Standardized security** configurations improve IT management efficiency

Policy Commander automates Windows security compliance to reduce organizational risk.

The risks keep going up and the stakes are high. Security breaches can have devastating consequences, and they can come from internal or external threats. Automating Windows system security with Policy Commander puts you in complete control of your compliance challenges. So start locking down your Windows computer systems, and keep them locked down – automatically – all the time. Policy Commander is *the* proactive solution for Windows security compliance.
